SINAMICS G120P and SINAMICS G120P Cabinet pump, fan, compressor converters

Integrated Drive Systems

Overview

The core elements of a fully integrated drive system are frequency converters/inverters, motors, couplings and gear units. Siemens offers all the required components in top manufacturing quality from a single source, perfectly integrated – operating perfectly together, for all performance classes.

As a standard solution or tailored to individual requirements: no other provider on the market is able to offer a comparable portfolio. All Siemens drive components are optimally tuned to each other so that they interact ideally in every application.

Siemens Integrated Drive Systems turn simple drive components into real systems. Drive technology based on IDS ensures maximum productivity, energy efficiency and reliability in every automation environment and over the entire product lifecycle.

SINAMICS G120P frequency converters

SINAMICS G120P is an important element of an integrated drive system. The core elements of a fully integrated drive system are SINAMICS G120P frequency converters, motor types SIMOTICS SD and GP (VSD10 Line) and SIMOTICS FD, as well as couplings. Vertical integration is achieved by the CU230P-2 Control Unit.

Drives with a quadratic load torque ($M \sim n^2$), such as drives for pumps and fans, require the full torque at rated speed. Generally, increased starting torques or load surges do not occur.

The following applies to selection of a suitable converter for drives with a quadratic load torque: The rated current of the converter must be at least as large as the motor current at full torque in the required load point.

SIMOTICS GP and SIMOTICS SD – VSD10 Line motors

VSD10 Line motors are based on the 1LE1 platform and are available in the following versions:

- General Purpose Motors, shaft heights from 100 to 160, aluminum
- Severe Duty Motors, shaft heights from 100 to 315, cast iron

These motors are optimized for operation on a SINAMICS G120 converter. They are intended solely for converter operation. They must not be connected directly to a mains supply.

Functions integrated as standard for converter operation:

- Insulation system optimized for converter operation
- Built-in temperature sensor
- Bearing insulation NDE (shaft height 280/315)

The VSD10 Line provides the link to the SIMOTICS FD series for converter-fed motors.

SIMOTICS FD motors

The new generation of SIMOTICS FD (Flexible Duty) low-voltage motors will be available in four shaft heights with output ratings ranging from 200 kW to 1600 kW and higher. SIMOTICS FD motors are based on an innovative modular system. These air-cooled and water-cooled converter motors are available in numerous different versions and therefore suitable for a wide variety of applications in a host of different industries.

SIMOTICS FD in shaft heights 315 to 400 is designed for operation on SINAMICS G120P converters with output ratings ranging from 200 kW to 630 kW.

FLENDER couplings as part of the drive system

A drive system comprises individual machines, including the motor and gear unit. Couplings combine these components and frequently also establish the connection to the driven machine.

The coupling can perform other tasks in addition to the transmission of rotary motion and torque, such as:

- Compensation for **shaft misalignment** with low restorative forces
- Influencing of intrinsic torsional frequency and **damping**
- Torque interruption or limitation in response to **overload**
- Electrical **insulation**, noise insulation
- Function in **explosive environments**

Overview of relevant coupling types

Design	Description
N-EUPEX	Flexible cam coupling • Universally implementable coupling for compensation of shaft misalignment • Suitable for plug-in installation and easy assembly with three-part design Rated torque: 19 ... 62000 Nm
RUPEX	Flexible pin and bush coupling • Fail-safe, universal coupling for medium to very high torques with a good misalignment range • Compact design, low weights and mass moments of inertia • Suitable for plug-in assembly Rated torque: 200 ... 1300000 Nm
ARPEX	All-steel couplings • Zero-backlash, torsionally rigid coupling • For compensating radial, angular, and axial shaft misalignment by means of two flexible lamella packages made of stainless spring steel • Easy assembly thanks to compact lamella packages Rated torque: 92 ... 1450000 Nm

¹⁾ Rated power based on the rated output current I_{rated} . The rated output current I_{rated} is based on the duty cycle for low overload (LO).

²⁾ The rated output current I_{rated} is based on the duty cycle for low overload (LO). These current values are valid for 400 V and are specified on the rating plate of the Power Module.

³⁾ The base-load current I_H is based on the duty cycle for high overload (HO).

PM230 Power Modules, 0.37 kW to 90 kW

PM230 Power Modules

Selection and ordering data

To ensure that a suitable Power Module is selected, the following currents should be used for applications:

- **Rated output current for applications with low overload (LO)**
- **Base-load current for applications with high overload (HO)**

With reference to the rated output current, the modules support at least 2-pole to 6-pole low-voltage motors, e.g. the SIMOTICS GP and SIMOTICS SD 1LE1 motor series. The rated power is merely a guide value. For a description of the overload performance, please refer to the general technical specifications of the Power Modules.

¹⁾ The rated output current I_{rated} and the base-load current I_{L} are based on the duty cycle for low overload (LO).

²⁾ The base-load current I_{H} is based on the duty cycle for high overload (HO).

³⁾ Typical values. You can find more information on the Internet at <https://support.industry.siemens.com/cs/document/94059311>

⁴⁾ The input current depends on the motor load and line impedance and applies for a line impedance corresponding to $u_{\text{K}} = 1\%$. The rated input currents apply for a load at rated power (based on I_{rated}) – these current values are specified on the rating plate.

⁵⁾ Max. motor cable length 25 m (82 ft) (shielded) for PM230 Power Modules with integrated line filter to maintain the limit values of EN 61800-3 Category C2 (filter A) or C1 table 14 (filter B). With unshielded cables, Categories C2 and C1 are not achieved.

⁶⁾ It is essential to plug on an operator panel or the blanking cover in order to achieve degree of protection IP55/UL Type 12.
For more information, see [Operator panels and blanking cover for PM230 Power Modules](#) in section [Supplementary system components](#).
