

### product type designation

### Power supply unit for charging station

SIMATIC RTLS accessory, power supply unit for charging cradle, 6GT2790-0DD10, with IEC plug-in connector C14, without power supply cable, in: AC: 100-240 V, 1.4 A, out: DC: 5 V, 6 A, hollow plug 2.1 / 5.5 mm.

### type of current supply

Input: 90 to 264 V AC, output: 5 V DC / 6 A

### suitability for use

For connecting to the charging cradle for RF4083T

### suitability for operation

For connecting to suitable power grids; for the operation of an RTLS charging cradle

### electrical data / input

#### voltage curve / at input

1-phase AC or DC

#### supply voltage / at AC

90 ... 264 V

#### supply voltage / rated value

230 V

#### type of voltage / of the supply voltage

AC/DC

#### line frequency

- 50 Hz
- 60 Hz

Yes  
Yes

### electrical data / output

#### voltage curve / at output

DC

#### output voltage

- at DC / rated value

5 V

#### output current

- rated value
- rated range

6 A  
0 A

#### supplied active power / typical

30 W

#### efficiency in percent

85.5 %

### electrical data / closed-loop control

#### relative overall tolerance / of the voltage

5 %

#### residual ripple / maximum

0.15 V

### electrical data / protection and monitoring

#### property of the output / short-circuit proof

Yes

#### design of short-circuit protection

Permanent

#### enduring short circuit current / RMS value / maximum

9 A

### electrical data / safety

#### galvanic isolation / between input and output

Yes

#### galvanic isolation

I/P-O/P, I/P-FG, O/P-FG: 100 MOhm / 500 V DC / 25°C / 70% RH

#### operating resource protection class

Class I

### interfaces

#### number of electrical connections

- for power supply

2

#### type of electrical connection

- at input
- at output

Schuko socket CEE 7/7 with 2 m connecting cable, at power supply IEC320-C14 AC Inlet  
P1J: ID 2.1 x OD 5.5 with 1 m cable

|                                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |

| security information                                    | Siemens provides products and solutions with industrial cybersecurity functions that support the secure operation of plants, systems, machines and networks. In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial cybersecurity concept. Siemens' products and solutions constitute one element of such a concept. Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place. For additional information on industrial cybersecurity measures that may be implemented, please visit <a href="https://www.siemens.com/cybersecurity-industry">www.siemens.com/cybersecurity-industry</a> . Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats. To stay informed about product updates, subscribe to the Siemens Industrial Cybersecurity RSS Feed under <a href="https://www.siemens.com/cert">https://www.siemens.com/cert</a> . (V4.7) |
